

Squid Game-7 Project Update-1 Requirements

Upgrade your existing project into a **feature-rich, production-ready, and professional application**. This applies to any project type, such as **Event, E-commerce, Social, Travel, Food, Real Estate, AI, or similar platforms**.

1. Global UI & Design Rules

- Use a maximum of **3 primary colors** (+ optional neutral color).
- Support **Light & Dark mode** with proper contrast.
- Maintain consistent layout, spacing, and alignment throughout the project.
- All cards and components must have the same size, border radius, and visual style.
- Forms must include **validation, error messages, success states, and loaders**.
- Fully responsive for **mobile, tablet, and desktop**.
- No placeholder or dummy content allowed.

2. Home / Landing Page

Navbar

- Full-width background.
- Minimum **4 routes (logged out)**. [Example: Home, Items, About, Login]
- Minimum **6 routes (logged in)**. [Example: Home, Items, Dashboard, Blog, Profile (Dropdown), Logout]
- At least **1 advanced menu** (dropdown / profile menu).
- Sticky or fixed position.
- Fully responsive.

Hero Section

- Height limited to **60-70% of the screen**.
- Interactive elements (slider, animation, CTA).
- Clear visual flow to the next section.

Sections

- Minimum **8 meaningful sections**. Examples include Features, Services, Categories, Highlights, Statistics, Testimonials, Blogs, Newsletter, FAQ, Call to Action, etc.

Note: *These are just examples; you are free to design your own sections based on project context and ideas.*

Footer

- Fully functional footer.
- Working links only.
- Contact information and social links included.

3. Core Listing / Card Section

- Each card must include: Image, Title, Short description, Meta info (price, date, rating, location, etc.), “View Details” button
- Card Rules:
 - Same height and width
 - Same border radius and layout
 - Desktop view: minimum of 3 cards per row
 - Skeleton loader while data is loading

4. Details Page

- Publicly accessible
- Multiple images or media (if applicable).
- Separate sections:
 - Description / Overview
 - Key information / Specifications
 - Reviews / Ratings (*if applicable*).
 - Related items (*if applicable*).

5. Listing / Explore Page

- Search bar
- Filtering must be implemented using **at least 2 fields** (e.g., category, price, rating, date, location).
- Sorting options
- Pagination or infinite scroll
- Fully functional filtering

6. Authentication System

- Login and Registration pages
- Demo login button (auto-fill credentials)
- Social login (Google / Facebook)
- Clean and professional UI

7. Dashboard (Role-Based)

- Multiple Roles: Like User / Admin / Manager
- Sidebar navigation:
 - User: minimum **4 menu items / page** [Example: Overview, My Items, Profile, Settings]
 - Admin: minimum **6 menu items / page** [Example: Overview, Manage Users, Manage Items, Analytics, Categories, Settings]
- Implement a profile icon with a dropdown menu in the dashboard navbar, including options such as **Profile**, **Logout**, and related actions.
- Dashboard must include:
 - Overview cards
 - Charts (Bar, Line, Pie, or any other type) should reflect real, dynamic data
 - Data tables
- Profile page with editable user information
- All tables in the dashboard should have filtering and pagination capabilities.

8. Additional Pages

At least **2-3 additional pages**, such as:

- About
- Contact
- Blog
- Help / Support
- Privacy / Terms

9. UX & Responsiveness

- No lorem ipsum or placeholder content
- Fully responsive across all devices
- Proper spacing and alignment
- All buttons and links must be clickable
- Dark mode must maintain proper contrast

10. Forms Handling

All forms must include:

- Client-side validation (required fields, format validation)
- Server-side validation
- Proper error/success messages

- Loading state (spinner or disabled button)
- Proper label usage
- Accessible inputs (label connected with input)

Forms required:

- Login
- Registration
- Contact
- Create item
- Edit item
- Profile update

11. Backend Requirements

Required Stack:

- Express
- MongoDB / PostgreSQL / MySQL
- ODM (Mongoose) / ORM (Prisma)

Folder Example:

```
server/  
index.js  
routes/  
controllers/  
middleware/  
config/
```

Architecture:

- Basic modular structure
- API route separation
- Centralized error handling
- Proper status code usage

Database:

- Proper schema planning
- Relationships (if needed)

Security:

- Password hashing (bcrypt)
- JWT token authentication

- Input validation
- CORS configuration
- Role-based access control

12. Code Quality Rules

- Clean and organized folder structure
- Reusable components
- Custom hooks (if React-based)
- Proper environment variable usage
- No console logs in production
- Meaningful commit messages

13. Final Submission Requirements

- Live Website URL
- GitHub Repository Link (Frontend & Backend)
- Demo Credentials
 - User Email & Password
 - Admin Email & Password
